USB Driver Signature Windows 10 last Update

Dear all,

After the most recent Windows 10 update in can happen that the FLEX³PRO driver (Videologie) or the PERET USB driver will not be recognized anymore and automatically replaced by a non-working Windows Driver. Please boot Windows in the special mode (see below YouTube link) pressing the shift-key while executing the restart.

https://www.youtube.com/watch?v=71YAIw7_-kg

click the Windows Icon on the task bar with the right mouse button – select device manager, select the com port and select replace driver. The driver is already on your computer. So you simply need to select it

Confirm to install the driver even if there is no signature.
